

With the purchase of a Walletmor ambassador package, you have entered into an agreement with Walletmor Ltd to provide consultancy and support services, which will result in obtaining a payment implant. Below is all the important information necessary to help you make your payment implant dream come true.

Any physical item that allows you to make contactless payments is a Payment Instrument. Payment Instruments, such as cards, can only be obtained from licensed financial institutions (such as banks or mobile wallets). Moreover, every Payment Instrument introduced to the market must be approved by the supervising body such as the SEC or FCA. No organization currently offers an implantable Payment Instrument. Needless to say, selling modified Payment Instruments is also not allowed. It is only possible to modify an approved and legally sold Payment Instrument for personal use. Walletmor Ltd acts on your behalf to acquire a Payment Instrument and request modification from a 3rd party, the Walletmor Foundation. Walletmor Ltd does not provide Payment Instrument modification services.

What Is The Process For Getting A Payment Implant?

- Acting on your behalf, Payment Implant Services will obtain a Payment Instrument issued by a relevant financial institution. It then needs to be modified so it is of the appropriate size and encapsulated with biosafe implantable materials that are safe for implantation. Finally the modified Payment Instrument must be connected to your current account to be made to function properly on the payment processing network.
- The modification procedure requires extracting the semiconductor that stores payment data from the Payment Instrument. Then, the semiconductor must be connected to a new small format flexible antenna coil. The modified design allows the Payment Instrument to be made safe for implantation.
- The modified Payment Instrument must be encapsulated in biosafe polymer resin to ensure a hermetic seal. Then, a series of safety and quality tests will be conducted to eliminate risk of infection. The final step in the procedure is cleaning the implant with a suitable antiseptic mixture to eliminate bacteria, viruses, and infectious agents. The implant will then be ready for installation by a professional under sterile conditions.

MOST IMPORTANT

- Following the terms and conditions of consultancy and services you purchased from Walletmor Ltd by default, you have granted Walletmor Ltd. power of attorney to act on your behalf and represent your interests before the Walletmor Foundation. The statutory goal of the Walletmor Foundation is promoting the idea of biohacking, especially in the field of supporting people who wish to improve their bodies with the use of modern and innovative technologies, devices, and implants, by modifying existing products available in the market for safe installation and use within the body. It means the Walletmor Foundation will perform the described modification procedure at its own expense and will provide you with a fully functioning modified Payment Instrument as an implant device.
- In the package, you will find the instruction guide, which includes installation instructions, a list of recommended professionals capable of conducting the installation procedure, and instructions on how to open an account with a financial institution from the European Union with which you will be able to connect your payment implant.
- Maintaining a deposit account at a financial institution recommended by the Walletmor Foundation is free of charge. The cost of the installation procedure is approximately 50 GBP. For your health and safety, we seriously discourage performing any part of the installation procedure on yourself.
